

AnthroTools

This section describes software that may be of use in anthropological research and other social sciences. Please add software, free or otherwise, that you have found interesting. If it is a generic application, such as a word processor, please describe 'exactly' what makes it useful to anthropologists, including links to a new or existing page of examples of use by yourself or others. You may want to add new pages of examples of use of existing entries, and link these to the page that introduces the software.

[Add new Software Description](#)¹

Name	Description	ID
Compendium	Collectively elicit, organize and validate information	63
EthnoAtlas	Make and analyze tables based on the cross-cultural standard sample.	37
FieldMap	Map based data collection and information access tool for field sciences.	38
Grass	Geographic Information System	62
HyperEngine-AV	Video editing software	50
ImageInterviewer (AKA AudioNote)	assists photo-elicitation interviewing and management of interviews	36
Kinship Editor	The KinshipEditor program is a simple editor for entering genealogical data in the form of a fairly traditional kinship diagram.	102
KNeTs	An interactive interview tool for creating knowledge-based models	35
Mage	3D display program - can be used for network data	56
MAGpie	Creating closed captions and audio (video) descriptions	55
NetDraw	A program for drawing networks	57
Pajek	Program for Large Network Analysis	58
PGraph	Kinship network analysis	59
R	Integrated suite of tools for statistical data analysis	48
Sample Size Calculator	determine how many people you	88

1. new

	need to interview in order to get results that reflect the target population as precisely as needed. You can also find the level of precision you have in an existing sample.	
Sampling from Small Populations	An excel spreadsheet that assists in calculating sample sizes for small populations	87
SocNetV	Social network analysis	60
SoNIA	Visualizing dynamic or longitudinal network data	51
Transana	Transcription and qualitative analysis of audio and video data	49
UCINET	Analysis of social network data	61
VideoGrok	Divide one or more videos into segments kept in a transcript, add metadata to each segment and perform searches on segments using free-text or meta data. A transcript or search can be saved as a standalone movie including origin and meta data.	39
Weft QDA	Code/Retrieve/Search qualitative data analysis software	98
